Results-oriented Full-Stack Developer specializing in Next.js & TypeScript, building performant, accessible, and user-focused web applications.
Delivered production SaaS tools (invoice automation with WhatsApp & PDF generation) and high-fidelity Web3 interfaces with data handling.
Passionate about clean architecture, A11y, and turning business needs into intuitive experiences. Open to remote opportunities.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+).
- **Frontend:** Next.js (App Router and Server Components), React.js, Tailwind CSS, Redux Toolkit**,** Context API, Framer Motion.
- **Backend & Database:** Node.js, Express.js, MongoDB, Firebase, REST APIs.
- **Specialized:** Web Accessibility (A11y), Performance Optimization, Unit Testing Logic, Git/GitHub.
- **Testing & Tools:** Jest, Cypress (E2E), Postman, Vercel, Git/GitHub.

TECHNICAL PROJECTS

SaaS Invoice Generator | *Next.js, TypeScript, MongoDB, Express.js*

- Architected a full-stack billing solution currently in private beta, designed to automate professional invoicing for a pilot group of 5+ independent contractors.
- Engineered a secure authentication system (Passport.js), managing user sessions and protected invoice history.
- Integrated WhatsApp Business API for one-click invoice sharing, improving client communication speed.
- Developed a dynamic custom PDF generation engine with real-time calculations, taxes, and totals ensuring pixel-perfect output.
- Developed End-to-End (E2E**)** tests to ensure critical user flows like authentication and PDF generation and remain functional across updates.

Web3 Protocol Interface (Technical Re-implementation) | *Next.js, Typescript, Tailwind CSS*

- Engineered a high-fidelity frontend dashboard for a Web3 protocol, focusing on complex data visualization and responsive UX.
- Developed a custom Mock-API integration layer to simulate real-time block chain data, implementing dynamic pagination, multi-parameter sorting, and advanced filtering.
- Designed a sophisticated state management system using redux toolkit and context API to handle complex nested data structures, ensuring a seamless and "snappy" UI.
- Utilized Framer Motion for professional-grade micro-interactions and transition states.

HENNGE Global Admission Challenge | *Next.js, Typescript, REST API*

- Developed a secure frontend module implementing HTTP Basic Authentication **(RFC2617)** for API communication.
- Achieved high A11y (Accessibility) standards by managing keyboard focus and ARIA live regions for real-time error feedback.
- Engineered a validation engine to handle complex business logic and distinct HTTP status codes (401, 403, 422).

EXPERIENCE & PROFESSIONAL DEVELOPMENT

HNG Internship | *Frontend Developer (Incoming)* | *April 2026*

- Selected for a high-intensity, milestone-based 2-3 months program focused on building enterprise-scale applications under strict deadlines.
- Vetted through a competitive screening process testing proficiency in modern JavaScript and technical problem-solving.

Independent Full-Stack Developer | *Nigeria* | *2023 – Present*

- Partnering with local clients to design and deploy custom web solutions, prioritizing mobile responsiveness and SEO.
- Dedicated 1,000+ hours to mastering **Next.js Server Components** and asynchronous backend patterns to bridge the gap between academic theory and production development.
- Actively follow industry communities like **WeMakeDevs** and **EddieHub** to stay aligned with emerging frontend trends and security best practices.

EDUCATION

B.Sc. Computer Science | University of Port Harcourt, Nigeria | *2015 – 2019*
